GOOD PARENTS, BETTER BABIES
AN ARGUMENT ABOUT REPRODUCTIVE TECHNOLOGIES,
ENHANCEMENT AND ETHICS

Erik Malmqvist
New reproductive technologies, together with an increasingly rich understanding of human genetics, bring with them great promises to improve the human lot. But at the same time they raise moral concerns that are difficult to make sense of with the help of familiar ethical principles. Are these concerns well-founded, or rather dubious emotional reactions, beyond the pale of reason? This book is a critique of some of the ways in which this and related questions have often been discussed, and an attempt to shed new and different light on them.

Erik Malmqvist is a researcher at Linköping University. This is his doctoral dissertation.
