Human Adipocytes – Proteomic Approaches

By Åsa Jufvas

- Page 5 – Last sentence of paragraph 2 (and fig. 3):
  PKB activation of the mitogen-activated protein kinase (MAPK)…

  Should be:

  Insulin activation of the mitogen-activated protein kinase (MAPK)…

- Figure 8:
  flip the peptide backbone or switch direction of the arrows for the y-, b-, c- and z-ions. Serine is a neutral amino acid, not negatively charged.

- Paper III, Figure 2:
  Replace the figure legend with: IQGAP1 distribution in the adipocytes was visualized with a fluorescent antibody against IQGAP1 using confocal microscopy. The nucleus was stained with DAPI.
